
There's an Accurate, Easier and Safer Way to Check Feed Bins!

BinTracPRO FEED BIN MONITOR

Available From Sioux Automation Center, Inc.

Accurate, Affordable Weight-Based Bin Monitoring:

BinTrac Pro combines highly accurate "S" load cell technology with the economies of innovative design. It provides both numeric weight measurements and a quick reference indicator that makes checking bin levels as easy as reading a rain guage.

Unique Load Cell Mounting:

The patent pending load cell brackets require minimal ground clearance for easier installation. There's no need to discount and readjust augers.

Brackets are anchored to the concrete pad and the bin legs are attached to the brackets. A few turns of a built-in adjusting bolt are all that's needed to raise bin and transfer weight to the load cells.

No jacking
Self-lifting load cell bracket saves time and money.

Easy Setup and Operation:

BinTrac Pro only needs to be zeroed once when the bin is empty. The console offers maximum mounting flexibility with a single cable connection. Individual load cells are connected to a "smart: summing box for a cleaner installation. A radio transmitter option is also available to monitor bins from a remote office.

The all-weather console and load cells are designed for reliable operation under extreme conditions.

Monitor up to 4 bins with 1 BinTrac Pro

BinTrac VMI VENDOR MANAGED INVENTORY

Available From Sioux Automation Center, Inc.

No More Climbing Bins

Eliminates one of the most common on-farm safety risks

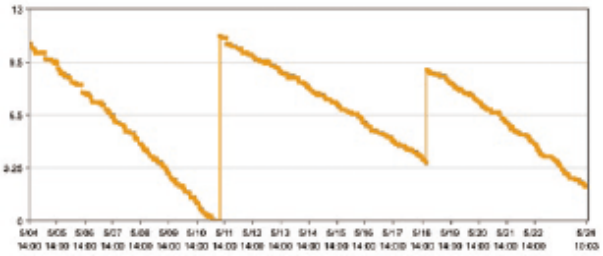
Ordering feed still relies on someone visually checking bins and calling the mill. Typical weekly cycles of high and low volume days, long weekends and out-of-feed events create logistic log jams at feed mills that drive up the cost of manufacturing and delivery.

A Better Way:

Unil now, feed monitoring systems and software have been too expensive, difficult and costly to install, unreliable or hard to use. BinTrac VMI get it right.

BinTrac VMI is a web-based program that uses patented technology exclusively licensed to Herdstar.* It utilizes the full cabability of the BinTrac Pro electronic bin monitoring system to provide a total solution that is accurate, economical and easy to use.

Sample 20-day Bin History
Graphically shows hourly feed bin weights



The Most Accurate & Reliable:

BinTrac VMI works with weight-based bin monitoring systems such as BinTrac Pro sensors to accurately measure on-farm feed inventory and disappearence rates. Mills and management offices have access to up-to-the minute information through a password protected website.

The user-friendly “Order Desk” interface clearly shows bin status and features smart alarms to allow remote feed ordering, order tracking and status of pending orders.
